

MangaCoin

What is Manga?

MangaCoin is a cryptocurrency born from the largest message board in Japan, 5ch.

It was created with the vision to support Manga artists and Manga enthusiasts around the world.

Manga has been one of the biggest influences on modern Japanese culture, loved by many people around the world. Unfortunately in the community, the financial and living circumstances for Manga artists is widely unknown and Manga artists often lack the financial support for funding projects.

Our goal is to provide the financial and the community network for Manga artists directly, so that they can focus and concentrate on producing what they are good at – drawing Manga.

We named our new Manga-crowdfunding system "CrowdManging". This system provides a support network for Manga artists for their readers, as well as offering a platform where you can publish your Manga projects safely. This project is unique in targeting crowdfunding in specified areas.

We hope that MangaCoin will achieve widespread use by Manga artists as well as Manga enthusiasts – for the further development in the future Manga and modern Japanese culture.

What is Manging?

The Manga Artist Publishes a Project

The manga artist releases the details of a project as well as the funding needed to reach the goal. After these details have been determined, such as the concept and idea of their Manga, they will ask the community for funding. As a unique incentive to raise funding, the Manga artist can offer gifts and rewards to those who contributed.

Readers Support Manga Artists with MangaCoin

Once the reader finds a project or Manga artist they would like to support, they donate using the cryptocurrency MangaCoin.

After the project is completed, the reader can get a unique gift or reward the artists decides and there can be different levels of rewards depending on the amount of the donation.

After the funding goals are met, the Manga artists begin their project

Manga artists start to work using the funding provided. They can also show sneaks peaks or previews of their project, and if necessary, they can even ask for readers' ideas as the project progresses. This allows for the readers and artists to work together to create something great for the community.

When finished, the final work will be released to the readers

After the Manga artist finishes their project, they will publish it to the readers and also reward those that helped donate.

Why Manging?

Anyone can contribute

Manga artists and readers can join CrowdManging easily, as long as they have a MangaCoin wallet address. MangaCoin addresses can be created by anyone easily.

Everyone can check the flow of transactions

The transaction history of all MangaCoins are stored on the blockchain and it also allows you to check the details of funding to the Manga artists.

Readers can support their favorite Manga artists

The time period up until publishing for Manga artists is quite tough financially, and sometimes if they don't get enough funding, a project can be scrapped. However you can support them at any time by donating and funding their projects. Even if the target is not reached, your donations will still go directly to the Manga artists.

To protect artists from illegal uploads

Your donation and funding will be given to the Manga artists immediately. With this system we will minimize damages caused by illegal uploads and downloads of manga and the artists' works. We also have volunteers that support activities such as reporting and deletion of illegal distribution of Manga works on piracy sites.

Specification

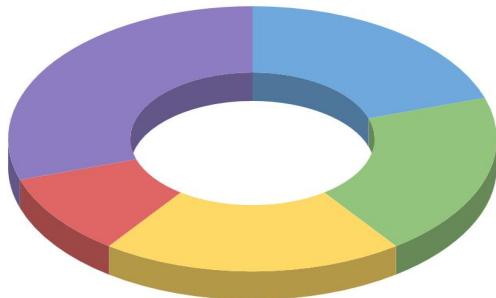

Coin details

| | |
|--------------|----------------------------|
| Coin Name | MangaCoin |
| Symbol | MANGA |
